

# Manual WebEDI Network Toys Germany

## Excerpt from the manual – chapter: **NTG MasterDataService**

---

Status: February 2021

## NTG MasterDataService (MDS)

With the NTG MasterDataService you have the possibility to have your article data filled in automatically into special trader templates such as into the template of Amazon, babymarkt.de, et cetera.

If this function has already been activated for you, you will find a button “MasterDataService” in your article overview.

As soon as you have selected a range, the button “MasterDataService” will be activated. You can only fill in one article of a range into a template at a time.

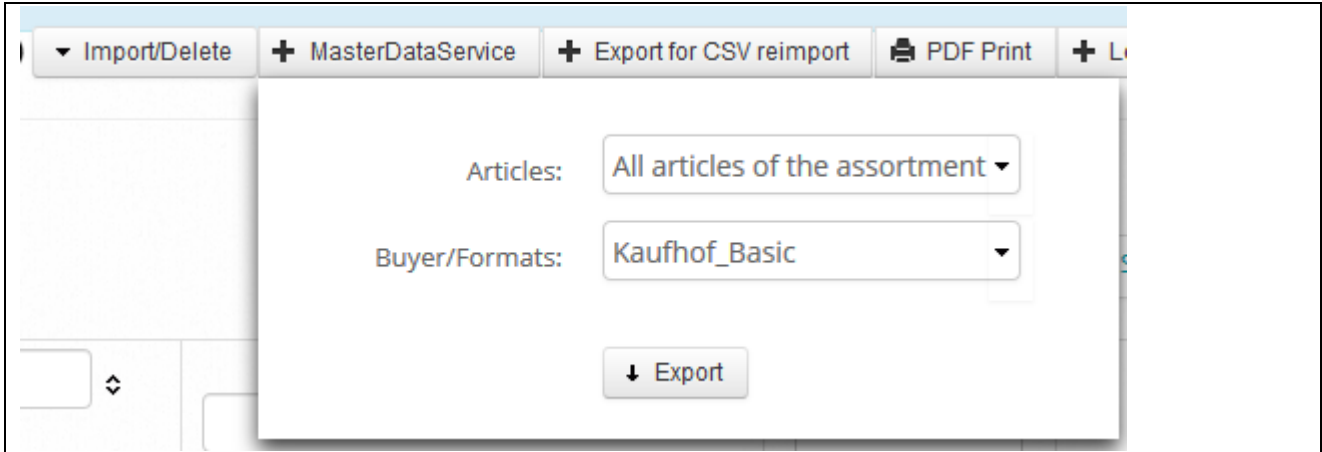

Merkliste	Image	Artikel Modus	Änderungsdatum	EAN	Artikelnr./Lieferant	Artikelbezeichnung	Bildnamen

If you want to just use only a few articles from the range, please select them accordingly before you activate the button.

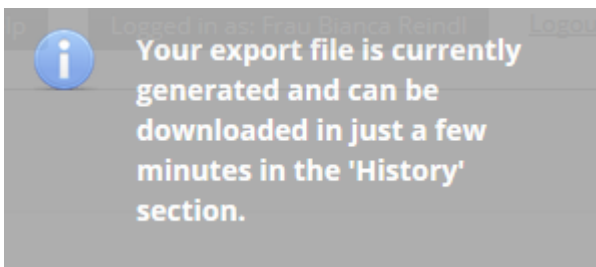

Merkliste	Image	Artikel Modus	Änderungsdatum	EAN
<input checked="" type="checkbox"/>		Geändert	06.06.2018 12:20:29	04260071879448
<input checked="" type="checkbox"/>		Geändert	05.06.2018 12:55:05	4260071878977

<input type="checkbox"/>		Neu	16.05.2018 13:31:23	4260071875082

Afterwards, you can select via the button if you want to use all articles of the range or just a selection of articles. Additionally, you can select the desired template.

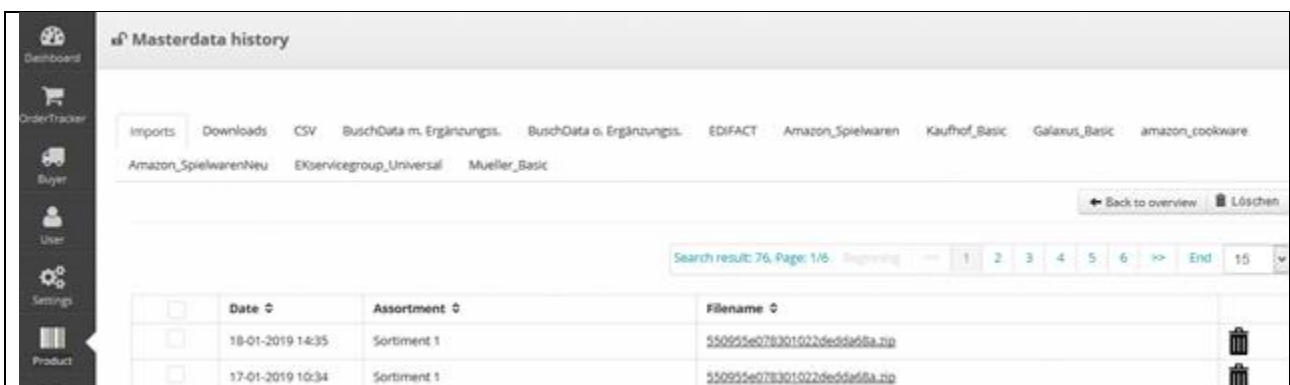

If you cannot select the desired template in “Trader/Formats”, please contact the colleagues at NTG Network Toys GmbH in Osnabrück (note support information on the last page of the manual).

If you click on “Export” now, the message appears that you find your desired template in a few minutes in the section “History”.

The target tab of your requested file depends on which template file you have selected and can be found under “Article/History”.

The first six tabs are your standard tabs in the NTG portal and include your imported and exported files depending on the file format. Starting from the seventh tab, you find the special trader formats which were filled with your article data via the Master Data Service.

## Memory List

You can prepare filling out the trader templates via the memory lists function, too.

The memory list saves the article selection per range as long as you are logged into the NTG portal. Via this list you can see which articles were already selected per range for the Master Data Service and you can continue to edit the selection.

Via the button  (upload memory list) you can upload your GTINs for the desired target range with the header NTG-P-007. The articles should be already indicated in your range.
